Tools for Reproducible Research
Week 3 Homework

1. Sign up for a GitHub account. Go to `education.github.com` and request an account upgrade (by clicking the "Request a discount" button and filling out the form), to get five free private repositories.

   As a student, you'll be able to get free access to a whole bunch of other resources. Click the "Get the pack" button at `education.github.com`

   Perhaps also sign up for a BitBucket account. Bitbucket is much like GitHub, but it allows unlimited free private repositories.

2. Try compiling the Rmarkdown example included in the course repository.

3. Take the script from the last problem in homework 2 and turn it into an R Markdown document (you might hide the two functions at the top, using the chunk option `echo=FALSE`).
