Tools for Reproducible Research
Homework, 20 March 2015

1. Turn the R code you wrote in the previous homework into an R package, with documentation and with a very short vignette. Get it to pass `R CMD check`.

2. Put it in a GitHub repository.

3. Email the URL for the GitHub repository to Karl (`kbroman` at `biostat.wisc.edu`).

4. If you made it a private GitHub repository, give Karl access to it.

   - Go to the GitHub repository and click "Settings" on the right.
   - Click "Collaborators" on the left.
   - Search for Karl's GitHub ID (`kbroman`) and click "Add collaborator".
